GLEB POLESHCHUK

Product Analyst | Data Scientist | Experimentation & Causal Inference
Mexico City, Mexico | +52 56 4716 4155 | poleshchukga@gmail.com | https://www.linkedin.com/in/gleb-poleshchuk-65224a247/

SUMMARY

Product analyst and data scientist with 4+ years driving measurable business impact through experimentation (100+ A/B tests) across two-sided marketplaces, and deep expertise in causal inference (CUPED, MLRATE, DiD, SCM, BSTS) to separate true incremental impact from noise. Uses Python and SQL to move from raw data to product decisions independently, end to end — with measurable impact on fraud losses, engagement, and revenue across three companies, and a track record of building the systems and rigor that make experimentation trustworthy at scale.

EXPERIENCE

Banco Plata — Mexico City
Lead Product Analyst — *March 2026 – Present*

- Cut company-wide fraud losses by 14% (~$2M annually in prevented fraud losses) by improving the precision of anti-fraud rules through rigorous causal validation of each rule change.
- Built 20+ dashboards using Streamlit and Superset, giving the product team self-serve access to core KPIs and eliminating dependency on ad-hoc reporting requests to the analytics team.
- Built a standardized A/B testing pipeline with CUPED-based variance reduction and automated SRM and novelty/primacy validation checks, reducing invalid test results and speeding up rollout decisions.
- Designed and taught a company-wide course on A/B testing for analysts and managers, raising the experimentation culture across the organization.

VkusVill — Remote
Causal Inference Research Consultant — *June 2026 – Present*

- Built a production Synthetic Control Method (SCM) framework for retail store performance, correcting 12% of phantom uplift from the prior methodology and surfacing 4% of previously undetected genuine uplift.
- Built a Bayesian Structural Time Series (BSTS) framework for last-mile delivery experiments, uncovering 6% of previously undetected uplift across 11 tests.

HeadHunter (hh.ru) — Moscow, Russia
Product Analytics Team Lead — *October 2023 – April 2026*

- Raised job seeker response rate to job postings by 20% in collaboration with the product and engineering teams by running 50+ A/B tests that shaped the product roadmap.
- Cut A/B test duration from 3 weeks to 1 across 300+ tests by applying CUPED with gradient-boosted covariate prediction, MLRATE with cross-fitted variance reduction and HC1 robust SEs, and a group sequential testing framework enabling statistically valid early stopping.
- Ran 20+ causal inference studies in a product with strong network effects, isolating true treatment effects from spillover and interference bias.
- Hired, trained, and managed a team of analysts and data scientists — set tasks, oversaw execution, and authored 10+ guidelines to speed up onboarding and improve the team's quality of work.
- Built a streamlined product data model using dbt and Airflow that increased analytics time-to-market by 80% and improved data quality.
- Designed and visualized the product's metric tree (100+ metrics) using Redash and Tableau, enabling data-driven decisions across management.

OZON.ru Moscow, Russia
Product Analyst *September 2022 – October 2023*

- Designed and analyzed 16 A/B tests for marketplace product changes, growing B2B segment revenue by 20%.
- Built a forecasting framework for product metrics, giving management a more transparent basis for goal-setting.

SKILLS

Causal Inference & Experimentation: A/B Testing, Sample Size & Power Analysis, CUPED, MLRATE, Difference-in-Differences (DiD), Synthetic Control Method (SCM), Bayesian Structural Time Series (BSTS), Sequential Testing, Variance Reduction

Technical: Python (pandas, numpy, matplotlib, plotly, scipy, statsmodels), SQL, Tableau, Superset, Snowflake, Databricks, Amplitude, Streamlit, Redash, dbt, Airflow

Other: Jira, Confluence, Miro, Asana

Languages: English — C1 | Russian — Native

EDUCATION

HSE University (Higher School of Economics), Moscow
Master's Degree — Software Engineering, specialization in Data Engineering, 2026 | GPA: 4.0

Moscow Institute of Physics and Technology (MIPT), Moscow
Bachelor's Degree — Applied Mathematics and Physics, 2024

OTHER

- Created and taught a 2-year course on product analytics and A/B testing at Lomonosov Moscow State University (MSU).
- Speaker at Matemarketing 2024, Russia's largest product analytics conference, presenting on data quality control for reliable product decision-making.
