

GLEB POLESHCHUK

Senior Product Analyst | Marketplace & Experimentation

Mexico City, Mexico | +52 56 4716 4155 | polegleb2001@gmail.com

Citizenship: Russia | Open to remote work and business travel

Product analyst with 4+ years designing and analyzing experiments across two-sided platforms — job seekers and employers at HH.ru, buyers and sellers at OZON — specializing in causal inference rigor (sample size estimation, CUPED/MLRATE, sequential testing, confounder identification) to guide product and growth decisions across supply and demand segments.

PROFESSIONAL EXPERIENCE

Lead Anti-Fraud Analyst — Banco Plata

March 2026 – Present | Mexico City

- Analyze fraud cases and identify statistically-grounded opportunities to improve transaction monitoring performance.
- Raised transaction monitoring precision from 7% to 20%.
- Fully stopped one type of fraud through a targeted detection improvement.

Causal Inference Research Consultant — VkusVill

June 2026 – Present | Remote

- Advise analytics teams on causal inference methodology, including confounder identification and separating incrementality from correlation in observational data.
- Built a production SCM (Synthetic Control Method) framework for retail store performance analysis, correcting for 12% of phantom uplift from the team's prior methodology while surfacing 4% of previously undetected genuine uplift.
- Built a BSTS (Bayesian Structural Time Series) framework for last-mile delivery experiments, uncovering 6% of previously undetected uplift across 11 tests.

Head of Product Security Analytics — HeadHunter (hh.ru)

December 2024 – April 2026 | Moscow, Russia

- Built a cross-functional team of product analysts and data scientists, partnering closely with engineering and business stakeholders.
- Built the reporting system for the product security analytics function, querying a Presto-based data warehouse.
- Applied causal inference (MLRATE with cross-fitted variance reduction, HC1 robust SEs) to measure the incremental impact of anti-fraud mechanics on a two-sided platform (job seekers ↔ employers), replacing naive before/after comparisons prone to selection bias.
- Designed a group sequential testing framework to enable statistically valid early stopping and continuous monitoring of experiments.
- Implemented several new anti-fraud mechanisms, increasing the automatic fraud-detection rate by 30%.

Head of Analytics Department — HeadHunter (hh.ru)

October 2023 – December 2024 | Moscow, Russia

- Built analytics for the Setka social network from the ground up, including the event-tracking schema and event collector design; authored roughly 100 analytics events and built metric trees for each sub-product with 4 product managers.
- Built working ETL processes on HH's data architecture and the core dashboards for the product.

Product Analyst — OZON.ru

April 2023 – October 2023 | Moscow, Russia

- Designed and analyzed A/B tests for marketplace product changes, partnering with product managers on success metrics and rollout decisions; handled ad-hoc analytics requests across the marketplace product.

Product Analyst — VseInstrumenti.ru

July 2022 – April 2023 | Moscow, Russia | Performed ad-hoc analytics, designed A/B tests, and built a bot-detection ML model based on behavioral features.

EDUCATION

HSE University (Higher School of Economics), Moscow

Master's Degree — Software Engineering, specialization in Data Engineering, 2026 | GPA: 4.0

Moscow Institute of Physics and Technology (MIPT), Moscow

Bachelor's Degree — Applied Mathematics and Physics, 2024

SKILLS

Causal Inference & Experimentation: CUPED, MLRATE, Synthetic Control Method (SCM), BSTS, Difference-in-Differences, DML, IV, Two-Sided Marketplace Analytics, Growth Analytics, Experimentation Design, Sample Size & Power Analysis, Statistics, Predictive Modeling

Engineering: SQL, Python, Spark, Databricks, Presto, S3, PostgreSQL, ClickHouse, Vertica, Airflow, Data Visualization, Stakeholder Communication

Languages: Russian — Native | English — Professional working proficiency
